

Analysis | Control

As the core of ISKOM, the new control centre monitors and analyses all data of the main water infrastructure. The rooms were designed as an all-in-one center that includes both control and meeting rooms.

According to the usage scenarios of the facility, the user-friendly, quiet, durable and stylish monitors of the MODIS and CONVERS series matched the meeting room perfectly. The MODIS series monitors with keyboard holder were placed for the executives and the CONVERS series was the best alternative for the delegates.

Design | Ergonomics | Technology

The very first installation of the brand new CONVERS ONE 220 monitors not only brought more flexibility to the elegance of the center, but also increased the efficiency of the meetings.

ISKOM Control Center, Istanbul

The **CONVERS ONE 220** is made for meeting and conference rooms, which should be both representative and multifunctional. With its screen diagonal of 21.5", the **CONVERS ONE 220** is as convenient to operate as it is to install in a space-saving way.

The **MODIS FLEX 220** is a combined monitor and keyboard unit. The low-noise stepper motor technology unfolds the **MODIS FLEX 220** when required and allows a clear view and use of the 21.5 inch Full HD monitor and the work surface hidden underneath.

If the monitors are not in use they can be simply and invisibly, **electrically retracted** into the table. And when extended, the aluminum-milled and powder-coated **CONVERS ONE 220** and **MODIS FLEX 220** unfold their full aesthetics and elegance

Installation	2019
