

Coordination | Control

Situated at the HQ of Turkish Ministry of Health, **SAKOM** is a key situational awareness & decision-making body that focus on public health related tasks. All sorts of actions from a single patient based activity to multi-disciplinary operations to managing epidemics are tracked live at the center. Authorities related to certain situations can gather together easily at the center & conduct coordination meetings to solve whatever the issue is.

Reliable | User-Friendly

No matter how small or big the tracked event is, as even a split second can make the difference between life & death, ability to process live data and responding in a timely manner is essential. **MODIS** series motorized monitors from **ELEMENT ONE** were the perfect fit when those needs were considered.

Elegant | Durable

While choosing the right display solution for each and every participant, two major points were at the highlight:

- Making all visual data available for the **simultaneous viewing** of participants during coordination meetings,
- Making it possible for the participants to have **individual control** over their respective displays easily when needed.

MODIS FLEX 173 monitors from ELEMENT ONE not only covered those points, but also added a premium feeling to the meeting table.

The MODIS FLEX 173 is a combined monitor keyboard unit. It is both elegant and precise in the movement mechanics. Highly flexible cables and torsion-resistant components ensure unparalleled longevity.
