Transparent CONVERS AURA by ELEMENT ONE

Perfect symbiosis of architecture and technology

CONVERS AURA from ELEMENT ONE is a retractable transparent 30-inch OLED touch monitor designed for architecturally sophisticated spaces. When extended and as long as there is no image signal, the screen is transparent and at the touch of a button the screen disappears completely when not in use. The touchscreen function and the seamless transition between table and monitor make CONVERS AURA the ideal choice for design concepts that combine aesthetics and functionality.

CONVERS AURA is the perfect addition to prestigious meeting rooms where aesthetics and technology are equally important. CONVERS AURA also creates a new, functional atmosphere in control rooms or retail areas thanks to its slimline appearance and transparency. At the touch of a button, CONVERS AURA is equipped with everything that ELEMENT ONE installs as standard in its vertically retractable monitors in the CONVERS series, such as whisper-quiet stepper motors and TCP/IP remote control interfaces.
